			MAY	JUNE	JULY	AUGUST	SEPTEMBER	OCTOBER	120	100	80	60	40	20 (cm)	
(3)	<i>Allium canadensis</i> CANADA WILD ONION		Strongly flavoured onion leaves can be used like chives in cooking. Bears umbels of white flowers as well as clusters of small bulblets which drop and quickly take root. Can be massed or scattered throughout plantings of other woodland species.							☀️ 💧	☀️ 💧				40-100
(2)	<i>Asarum canadense</i> WILD GINGER		Distinctive heart-shaped leaves makes this native an indispensable plant for woodland gardens. This plant contains the odor of culinary ginger. An excellent ground cover, which spreads modestly. Establish distinct colonies with 3 plants on 40-50 cm centres, or as a border around tree trunks.							☀️ 💧					20-40
(3)	<i>Carex pennsylvanica</i> PENNSYLVANIA SEDGE		A colony-forming sedge for partly shaded areas in woodlands. The leaves are long, thin and delicate, with elongated reddish-brown flowers in late April. Establish colonies with 3 plants on 30cm centres on bright woodland edges.							☀️ 💧	☀️ 💧				20-40
(2)	<i>Hydrophyllum virginianum</i> VIRGINIA WATER-LEAF		Woodland perennial with white to lavender bell-shaped flowers. Coarsely toothed pinnate leaves bear silvery variegation in spring, which fades as the leaves mature. An important species in the deciduous woodlands of Ontario and a good ground cover. Habitat: Moist woods and clearings							☀️ 💧	☀️				40-100
(1)	<i>Persicaria virginiana</i> JUMPSEED		This stunning cardinal red flower grows naturally on stream banks and in damp meadows. An excellent accent plant for a pond edge or a low, damp area of the garden. Attracts humminbirds & butterflies. Habitat: Wet meadows, edges of streams & swamps. Establish striking colonies with 3 plants on 30-40cm centres.							☀️ 💧	☀️				40-100
(3)	<i>Solidago flexicaulis</i> ZIG-ZAG GOLDENROD		Spikes of brilliant yellow flowers top the zig-zag angled stems of this adaptable species. Beautiful fall blooms and dry shade tolerance, it will form colonies over time. Useful for drier soils. Can be massed or scattered throughout plantings of other woodland species.							☀️ 💧	☀️ 💧				40-100
(1)	<i>Uvularia grandiflora</i> LARGE-FLOWERED BELLWORT		Pale yellow blooms dangle like bells from the upper leaf axils in early May. Leaves are soft blue-green, broadly oval to oblong, turning a glowing soft yellow in the fall. Habitat: Rich deciduous woods in calcareous soil.							☀️ 💧					40-100
(3)	<i>Viola pubescens</i> DOWNY YELLOW VIOLET		The leaves of this Violet are heart shaped, about as broad as long and downy hairy beneath. Five-petaled yellow flowers. An adaptive ground cover in most shady spots, and a good companion for many other woodland plants as it spreads by rhizomes and from seed.							☀️ 💧					20-40

Black Walnut and its close relatives produce juglone, a biochemical that inhibits growth of many plants. This custom tray provides eight (8) labelled species that will grow and spread effectively under Walnut trees. These species thrive on a variety of soils and moisture conditions, well adapted to the dappled shade of Walnut trees.

LEGEND

Space Coverage – The plants in this tray, spaced as suggested, will cover 3 to 4 square meters at maturity.

Alternates – Note: GMG may substitute the following species for this tray based on seasonal availability.

- White Wood Aster (*Aster divaricatus*)
- Rocky Mountain Fescue (*Festuca saximontana*)
- Wild Strawberry (*Fragaria virginiana*)
- Rough Woodland Sunflower (*Helianthus divaricatus*)
- Ohio Spiderwort (*Tradescantia ohioensis*)
- False Solomon's Seal (*Maianthemum racemosum*)
- Starflower False Solomon's Seal (*Maianthemum stellatum*)

TIPS FOR PLANT ESTABLISHMENT

“Establishment” means that new root growth eventually exceeds the weight and volume of the above-ground green vegetation. Successful establishment occurs when soil, light, fertility and moisture are managed and maintained through the first full season of growth.

You can plant in spring, summer or fall – With proper care, you can plant our trays through the entire growing season.

Soils and water - Pollinator plants grow on a wide range of soils, from sand to heavy clay, but they thrive when compost is lightly incorporated into the soil, and moisture is maintained in dry periods with mulch (such as well decayed bark). On sites that are sandy or drier, supplemental moisture should be provided for the first year when the **‘soil finger test’** indicates dry conditions in the top 2-3 inches of soil. If your soil is compact and resists absorption of water, use a small garden fork to gently loosen soil, mix in compost, and improve air and moisture penetration in the root zone. A diluted soluble fertilizer, high in phosphorous (e.g. 10-52-10), or bone meal mixed well into the soil, will encourage root growth if applied during planting.

Planting in hot weather - When planting in sunny, hot summer weather, temporary shading can greatly assist plant survival and establishment. Use cedar shingles pushed into the soil, wood scraps, or sheer fabric supported by small stakes (e.g. bamboo). Remove shading after a few days when the plant begins to grow.

Pests – Rabbits and snails like young nursery plants; Blood meal powder or hardware cloth enclosures can be used to protect during establishment. Snails can be hand-picked in early evening and pickled in vinegar.
